

EN 12786:1999**Safety of machinery - Guidance for the drafting of the vibration clauses of safety standards**

Gives guidance on how to deal with vibration in type C-standards where vibration is identified as a significant hazard. As such, this European Standard supplements the rules given in EN 414. The exact way that vibration is dealt with for particular machinery will depend on the structure of the type C-standards and is the responsibility of the type C-standards Technical Committees.
