

# New techniques and methods for noise and vibration measuring, assessing and reducing

Edited by: Dariusz Pleban

*Digital Monograph*

*The monograph "New techniques and methods of noise and vibration measuring, assessing and reducing" contains valuable material with a wide range of applications in the generally understood area of both noise and mechanical vibration reduction. The particular attention was meticulously paid to the impact of noise and vibration on the human body. This in itself stands clearly in line with the European Union's activity in reducing environmental pollution by noise and vibrations.*
